

# DITA Health Check

## Get your DITA project back on track

Are you working in DITA and experiencing any of the following symptoms: missed deadlines, over-extended budgets, or frustrated people? If you answered yes, then it's time for a health check.

## Health Check Services

This diagnostic engagement is used to investigate symptoms impeding your success while designing a plan to get you back on track. The engagement includes:

### Onsite workshop

This 2-day onsite workshop focuses on education and stakeholder interviews relating to authoring, publishing, and governance. The result is a roadmap and list of recommendations.

### Roadmap planning

The roadmap provides a high-level overview of the stages and activities involved in aligning the future state vision, budget, resources, and timelines. We look to uncover a compelling story for the Art of the Possible and how you will get there.

### Capabilities assessment

The capabilities assessment identifies and provides a high-level evaluation of skills, processes, and technology in play for developing, managing, and publishing your content. We highlight known issues and offer short- and long-term recommendations.

## Methodology

The workshop methodology includes

- Stakeholder and SME interviews
- reviewing documentation, process, and tools
- benchmarking industry practices, and
- formulating recommendations.

## Final report

The final report is compiled following the onsite visit to include detailed findings and recommendations for next steps.

## Contact us

Contact us today and start the conversation about your organization's DITA health. We're here to help.
